Perhaps we should wait till after the Fish Habitat Symposium. We can see what is presented there to get a better sense of what gaps exist.

Hi Phil,

I would welcome a discussion to refine the salmon assessment. I have a copy of the model KBRR developed to predict Coho streams, but didn't utilize it in the assessment. A meeting of the salmon researchers on the peninsula would certainly be beneficial. When would you like to try to meet?

Karyn,

Robert and I talked about the fish trapping data a bit. It would be difficult to say unequivacally where coho are not, so its usefulness in making predictions is limited. However, the Research Reserve also has lots of fish/weltand data. We were speculating about being able to combine these data sets to get something useful for the assessment effort. We were thinking that it might be worth a discussion among the principles for each study, as well as some of the rest of us who are interested. What do you think?

Phil

Hi folks,

I've uploaded all the draft hydrology assessment maps to <https://sites.google.com/site/hydrologyassessmentmaps/home>. (Yay Karyn!) Sue's also got them on disc. Mike and Phil, do you want emailed pdfs of each also? (There are six.)

I'm gonna formulate a few questions in writing so I can email them to you in advance, nothing elaborate.

See you Thursday.
